

GROWTH THROUGH INNOVATION

ROTARY FEED CONTROLLER

Teamed with in-bail identification, the Feed Control module identifies cows as they come onto the platform and delivers supplementary feed to individuals or groups of cows based on criteria that you set, such as condition score, post calving, pre-mating etc.

Features and Benefits

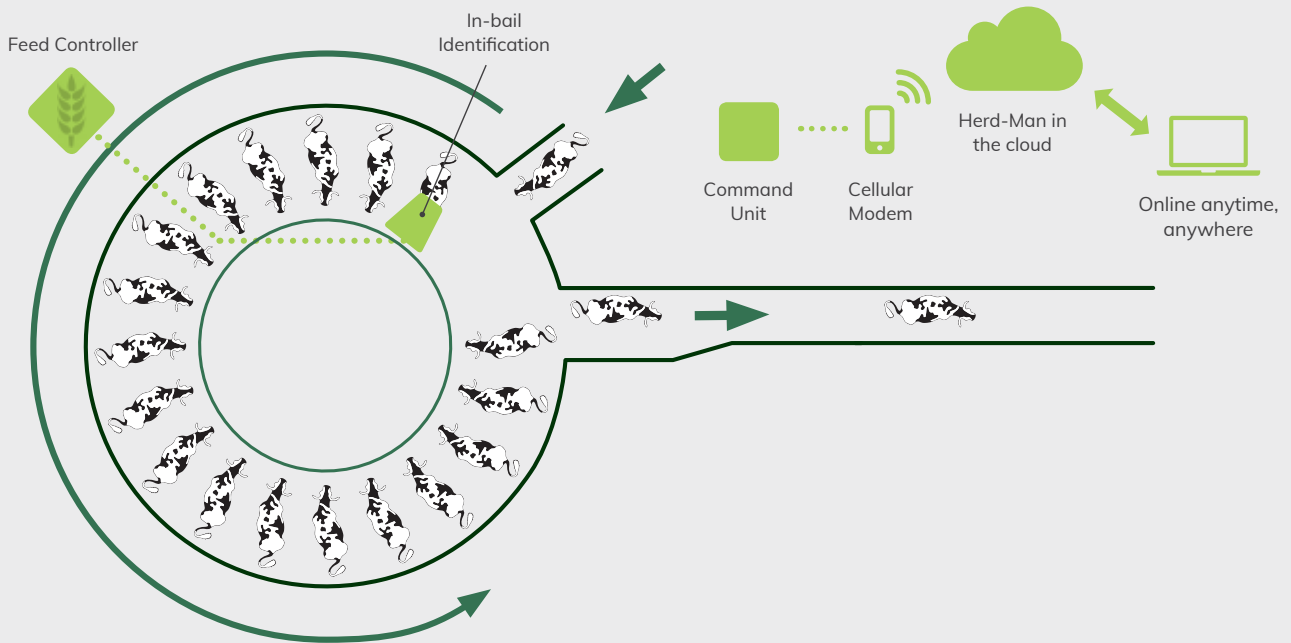

- In-bail identification means that you're able to nourish the cows that need it, so you get the best returns from supplementary feed
- Works with any third party in-bail feed hardware and controls up to four heads - liquid, grain or pellets
- Feed allocations can be changed online and take effect within 20 minutes, enabling you to modify feeding regimes based on conditions such as weather changes
- Saves feed by not feeding return cows twice
- In-bail identification automatically identifies and records individual cows, so that you can quickly identify missing cows or damaged/missing EID tags
- Integrates with Herd-Man Online Management tool, to set up and manage feed delivery.

GROWTH THROUGH INNOVATION

Rotary Feed Controller

Module includes

In-bail EID Panel Reader and Antenna

Feed Controller

Herd-Man Online Management tool

Command Unit, which connects in-shed actions with Herd-Man Online Management tool
